Abstract

What does your thesis talk about? Write a brief abstract explaining that!

Confused? Look [here](#) to get some advices.

Chapter 1

How to manage the chapters

In the "*document > chapters*" directory you can place the chapters that will compose your document. In particular, every chapter folder contains:

- A **root file** (that, conventionally, has the same name as the directory), containing the definition of the chapter (some introductory text) and the inclusion of the chapter's sections
- A **sections directory**, containing the sections composing the chapter
- A **images directory**, containing all the images that belong to the chapter

You need to include the chapter's root file as input in "*document > chapters > chapters.tex*" (that file is used by "*document > content.tex*" which is included in "*main.tex*").

Pro-tip: do not name chapters and sections with numbers; although it seems a good idea for ordering in the file manager, it is horrible if you need to move content (source: experience).

1.1 Table of Contents depth

The Table of Contents(toc) will automatically show entries up until a certain indentation. You can change this in "*settings > table_of_contents.tex*".

1.1.1 Subsection

Is shown in toc.

1.1.1.1 Subsubsection

Is shown in toc.

Paragraph Is **not** shown in toc.

1.2 Manage images

To add images and manage their placement, check [this link](#) (like the duck 1.1). Every new image that you add will be automatically added to the *List of figures*.

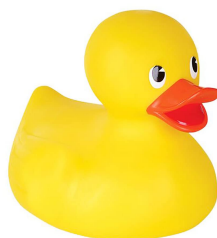

Figure 1.1: A Duck

1.3 Manage the Bibliography

In "`document > bibliography.bib`" you can place your bib references that will be automatically added to the document's bibliography every time you cite something [1].

Remember that often websites offering articles also allow you download a pre-made BibTex reference that can be pasted into the .bib file.

1.4 Add and use commands

You can place your newly defined commands in "`settings > commands.tex`"; this template includes the "`info`" command.

Info: This is an info

Chapter 2

Other components

Additional stuff you need to know.

2.1 Title page

The title page is included in "*main.tex*"; in "*document > title-page.tex*", you can modify the title page of the document. The following image shows an example of title page (I also need an image in order to upload this chapter's images directory).

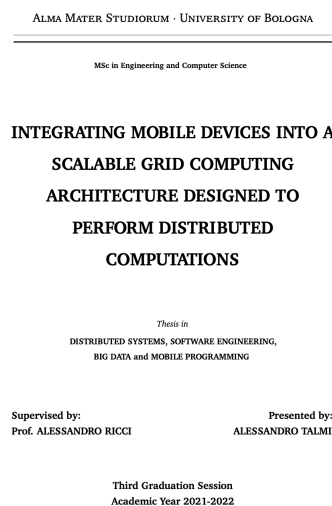

Figure 2.1: Title page example ([repository](#))

2.2 Dedication

The dedication is included in "*main.tex*"; in "*document > dedication.tex*", you can modify said dedication (remember to keep it short).

2.3 Acknowledgements

The acknowledgements are included in "*main.tex*"; in "*document > acknowledgements.tex*", you can modify said acknowledgements (remember to be kind).

Appendix A

Manage appendix

Appendix works exactly as chapters, but in another directory ("*document* > *appendix*"). Add new appendix chapters in "*document* > *appendix* > *appendix.tex*" or, if you do not need an appendix, remove the directory and the inclusion in "*document* > *content.tex*".

Showing sections

I prefer not to show an appendix section in the toc, so I use the asterisk in the section definition. This is really up to your personal taste.
