Abstract

A simple slide "documentclass" to use the standard LaTeX with the added option of including header and footer.

LaTeX slides with header/footer

The standard LaTeX `slide` class offers a very clean, sha
to-read font for slides. However, the standard class do
a provision for including header and footer on slides.

The slide class `sslides` allows creation of arbitrary heade
while preserving all of the functionality of the standard

LaTeX code can be used to generate any header and
`.tex` file for this manual provides a simple example o
template to independently specify the left-, center-, or
of both header and footer.

How to use

Copy the class file `sslides.cls` in a directory visible to LA
ample, the current directory where the slide file is run. T
two commands in the slide input file generate header a

`\oddh{ . . . }` generates text/objects

`\oddf{ . . . }` generates text/objects

The header/footer specified will show on all slides u
changed.

Example

```
\documentclass{sslides}
\oddh{ header field }
\oddf{ footer field }
\begin{slide}
. . . body of slide . . .
\end{slide}
\end{document}
```
